

# The Duckbill Paper Stripper

Kraft outer wrap stripping tool.

The proper paper stripper preserves the paper value for web paper users.

*The Duckbill Paper Stripper takes its name from the proprietary duckbill contour on the leading edge of the tool. The impact resistant engineered plastic tool incorporates a purpose-built design to slice, lift and separate unsellable paper from the reel spool without damage to the machined finish of the spool.*

## Principal Features and Benefits

### 1. Proprietary Duckbill Shaped Nose

- Easily and accurately slips into position under kraft outer wrap and the first wrap of useable paper on the roll, preventing paper damage.
- The "flat" on the base of the nose of the tool is designed to distribute cutting force forward, not down – this promotes a "gliding" action that can prevent paper scoring/damage.
- The Duckbill nose shape spreads the wrap away from the work.

### 2. Ergonomic Shaped Heel-End

- When nested properly in the palm of the user's hand the cutting force is all directed forward. Some paper strippers with a grip handle formed on the back of the tool, inadvertently promote "over-the-top" forces that cause the nose to dip and then bite, dig or score the useable paper.

### 3. Thermoplastic Construction

- Won't fray or splinter or break
- Holds its edge longer than cheaper plastics
- Can be cut down for personal preferences and "machined" with sandpaper to reestablish a sharp edge
- A steel bladed utility knife is no longer necessary in this function preventing paper damage, worker injuries or broken blades lodged in the roll or press.

*Web printers and publishers can't do much about preventing wastage on the press. But they can do something about unnecessary paper waste by avoiding damage to the paper just prior to the press.*

## SPECIFICATIONS

### Materials of construction:

*A high molecular weight, high temperature engineered thermoplastic compound reinforced with glass fiber.*

### Characteristics:

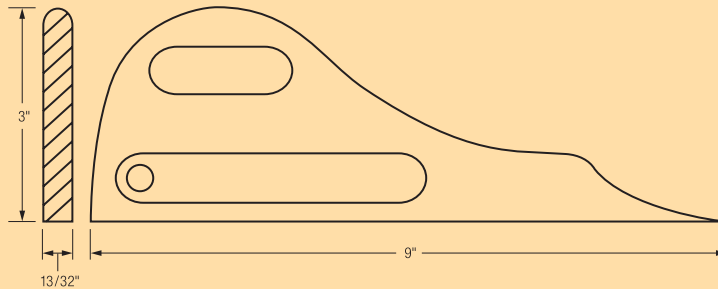

- Heat resistant to 480°F and thermally stable.
- Water and humidity resistant.
- Resists most non-aggressive chemicals.

### Dimensions:

*Length: 9"*

*Height: 3"*

*Width: 13/32"*

Duckbill is a world leader in engineered SPMM™ (Single Platform: Many Modules) concepts. These are task-specific, mostly upper-body, ergonomically-sound personal carrying solutions that can be equipped with an array of customized modules for carrying and positioning (or re-positioning) interchangeable hand tool, instrument and device modules. The Duckbill SPMM™ product is a professional grade, rugged and ergonomically sound tool carrying platform. It integrates AXIAlign™ Power Zone Design (PZD)™ principles to keep the user as erect as possible throughout the work day and reduce the number of bending, twisting, lifting and shearing events. Uninformed, casual or sloppy tool weight allocation leads to neck, shoulder, back, hip and knee pain or MSD's (Muscular Skeletal Disorders).
